compliance**

www.envirocompli.com

Environmental Compliance has a proven track record in providing a wide range of environmental training courses to develop both individuals and organisations. Our range of training courses address:

- Environmental Permit training
- Operator Monitoring Assessment (OMA)
- BS EN 14181 training
- bespoke courses.

Our in-house trainers are all recognised experts in their own field and have many years experience in environmental monitoring and consultancy. Courses range in length from ½-day to 2-days.

Environmental Permit Training

Environmental Compliance provides site specific training to ensure that a company is fully aware of its legal obligations in complying with the Environmental Permitting Regulations (EPR). The overall aim of the training is to provide relevant personnel with the necessary level of knowledge and understanding of the key concepts, both in relation to the company's overall environmental responsibility and ensuring Permit compliance.

Environmental Compliance ensures that the contents of the training course are specific to the Client's Permit and regulatory requirements.

Operator Monitoring Assessment (OMA) Training

The OMA scheme has provided an enforcement framework for the Environment Agency (EA) to assess the quality and reliability of operators' monitoring arrangements as required by their Permit. The OMA audit aims to identify monitoring shortfalls and potential areas for improvements and contribute to the targeting and prioritisation of independent check monitoring.

The objective of the 2-day training course is to provide managers/engineers responsible for implementing monitoring, with a training course designed to enhance their knowledge and understanding of emissions monitoring of industrial processes, thereby achieving a higher score in their OMA audit.

"By using Environmental Compliance's UKAS and MCERTS accredited monitoring services and the specific in-house OMA training received, we achieved an OMA score of 98%" R. Brenton, Operations Director.

BS EN 14181 Training

Environmental Compliance has developed its BS EN 14181 training course to reflect the growing need to understand and implement the requirements of BS EN 14181 and its applicability within the Waste Incineration Directive (WID) and the Large Combustion Plant Directive (LCPD). The course is for operators, or individuals, with responsibility for ensuring compliance of their Continuous Emission Monitors (CEMs) and with all aspects of BS EN 14181.

At the end of the 1-day course, individuals will have been provided the necessary knowledge and understanding of BS EN 14181 to ensure compliance with the standard can be achieved for their site.
